16. Abstract Data Management receives numerous requests for information about data holdings. In an effort to answer some of these questions, and to facilitate the requirements specification process, a series of interim catalogs are being developed. The 1979 data acquisition year is covered in this volume of the catalog with subsequent years to follow under different covers. This catalog lists by state those sample segment numbers for which aircraft data has been acquired and/or field inventory products produced.

Mr. D. H. Hay ✓
National Aeronautics & Space Administration
Lyndon B. Johnson Space Center
Houston, Texas 77058

Dear Mr. Hay:

Subject: Transmittal of 1979 Interim Data Catalog

The attached 1979 data year document is the first in a series of interim catalogs. This catalog was prepared as partial fulfillment of Action Document 63-2457-6612-07, Interim Catalog.

Ground data compilations for subsequent years will be forwarded under separate cover as the data becomes available.

Sincerely,

Vassie L. Cook

V. L. Cook

TABLE OF CONTENTS

- I. Introduction
- II. Specifications
- III. 1979 Ground Data Summary
- IV. Appendix

I. INTRODUCTION

The purpose of this document is to transmit information about the contents of ground and aircraft data holdings. The mechanism for transmitting this information is the completed Ground Data Summary Form (GDSF). The 1979 data acquisition year is covered in this volume of the interim catalog with subsequent years to follow under a different cover.

II. CATALOG SPECIFICATIONS:

Detail specifications, background information, description of the format, sources of information and an explanation of procedures for this catalog can be found in the Appendix of this document.

APPENDIX

GROUND DATA SUMMARY SPECIFICATIONS

Introduction

AgRISTARS/SR and FCPF projects generate complex data requirements to support equally complex task. Presently, a tremendous amount of historical agricultural data is resident within these projects, and new data is constantly being acquired.

Before detailed requirements can be developed, often the results of previous years data acquisition are analyzed to preclude duplication and ensure continuation of coverage. The methods and materials for performing these analyses have been deficient or non-existent resulting in late or inadequately defined requirements.

Data management receives numerous requests for information about data holdings. To provide more accurate information about data, to facilitate a more efficient data handling operation, and to aid in data requirement specifications, a requirement for a data inventory and catalog was developed.

The inventory process has been divided into two implementation phases. The Phase I inventory completed during September 1980 yielded information about master copy products of high utility and priority to the projects. The larger scoped Phase II inventory will encompass those products not inventoried during Phase I as well as information about data resident in electronic data bases.

Initially, a paper cross reference/catalog would be developed containing entries across a broad scope (relative to the Phase I inventory of data). However, because of personnel conflicts, the interim cataloging system will be down-scoped as not to interfere with the higher priority development of an automated cataloging system.

The purpose of this document is to outline the format specifications for a ground data summary compilation which will be developed in lieu of an interim paper catalog.

Scope. This document contains the following sections. (1) A conceptual description of the ground data summary (GDS) and a detailed description of the entry format and forms. (2) A list of the sources of information to be used to fill the ground data summary form and (3) an outline of the procedures that will be used to implement the GDS.

1. Catalog description and format

1.1 General Description

The Ground Data Summary interim catalog shall consist of a series of documents ordered by data acquisition year. Sample segment number will be the principle geographic reference. The catalog will list by state those sample segment numbers which have had aircraft and/or ground inventory data acquired for a given data acquisition year. Indications of other ground data or associated product availability will also be part of an entry for each sample segment number. Data location, size, volume, or format will not be included as entry information except where this information is an integral part of the data "name".

The series of catalog documents will be developed in a stepped sequence by data acquisition year beginning with 1979 and stepping through 1978, 1977, 1980 and 1975 - 1976.

1.2 Format

The Ground Data Summary form (GDSF) contains the principle format for entries to the GDS catalog. (See attachment) Information for all sample segment numbers for a given state will be recorded on a GDSF. A set of these state

forms for any data acquisition year will comprise the GDS catalog for that year.

1.3 GDSF Description.

The following is a description of the data columns contained on the GDSF.

Column 1 - Area of Interest. This column will be used to indicate the number of the geographic area for which data availability information is to be supplied. This number has previously been referred to as a "sample segment number."

Column 2 - County. This column will be used to indicate the county which contains the area of interest.

Column 3 - Aircraft 9 x 9 CT AV. This column will be used to indicate the availability of an aircraft color transparency taken over the area of interest for the subject year.

Column 4 - Acq. Date. The acquisition date of the aircraft image recorded in column 3 will be written in this column.

Column 5 - Field Inventory AV. This column will be used to indicate the availability of field inventory data. The product statused in this column is an overlay or aircraft print with crop code labels for all fields within the area of interest.

Column 6 - Wall to Wall UGTT. This column will be used to indicate the availability of a Universal Ground Truth tape. This tape contains the crop code labels and is geographically registered to a Landsat segment image. The entire area of the area of interest is covered.

Column 7 - Special Fields UGTT. The availability of Universal Ground Truth tape data for "special fields" identified on the area of interest will be indicated in this column.

Column 8 - 418 Dot OL, AV. This column will indicate the availability of a 20 x 20 inch mylar grided overlay for each area of interest. This overlay is used to determine preliminary ground truth information.

Column 9 - UGTT PFC Registration Date. The date of the PFC image used in the UGTT registration process (Column 6) is to be written in this column.

Column 10 - Periodic Observation AV. The availability of field observations data taken periodically during a crop year will be indicated in this column. This data is taken in conjunction with the field inventory data in Column 5.

2.0 Sources of Information.

The information used to build the Ground Data Summary was captured during the Phase I inventory. Four different inventory log books are to be used to compile the necessary information for each area of interest. The following is a list of the log books, location of the entry data on the log book columns, and the entry column that will be updated on the GDSF.

3.0 Entry Format.

All entries in the data columns of the GDSF will either be an "X" to indicate data availability, "NA" to indicate that products are not available or a "month-day-year" date. If questions or inconsistencies exist then a note symbol, either a letter or special symbol, will direct the user to an explanation page.

<u>Inventory Log Book Title</u>	<u>Inventory Log Column</u>	<u>GDSF Column</u>
1. Aircraft data inventory	1, 2, 3	1, 2, 3
2. Ground data packet inventory	1, 3, 7	1, 5, 8
3. UGTT inventory (by year)	9, 10, 4	6, 7, 9
4. Periodic observation inventory	1	10
5. Other-county name list		2
